

Compact, Multi-Position Fixed PCB Terminal Blocks

The CZI printed circuit board terminal block is a family of low-cost terminal blocks that range from 3 to 24 circuits, depending on the pin spacing. The wire is protected during termination with the use of a foil between the screw and the wire. The CZI is available in the standard wiring version and also a right angle pin version. CZI terminal blocks are UL recognized and are ideal for applications that require one fixed low-cost terminal block.
