

3-Wire Senior Terminal Blocks

The ASIDIK terminal block features 3 levels within one terminal block to carry out the connection of positive, negative and signal leads to multiple sensors. Using color-coded bridges, the ASIDIK accepts the sensor leads and then feeds the positive and negative connections to a feeder or distribution block, the ASIDIKD, which provides power for the sensors. The ASIDIK sensor terminal block can also be ordered with a LED installed so that you can have a visual indication and power to the sensor.

In the event that your system calls for a more modular approach to wiring sensors, ASI can provide sensor distribution boxes which mount directly to the equipment and accept the popular M8 and M12 connectors. ASI offers both 4 and 8 position sensor distribution boxes in a couple of different wiring configurations. More information can be found at www.asi-ez.com.

ASI also provides a wide range of sensor cables ranging from 1 meter to 5 meters as standard. Many different cable configurations are available, as well as a wide range of connectors. Custom cable configurations are available upon request.

Terminal Width 6.2mm
