

ACCESSORIES LEGEND

- N** Test Plug - SDD
The insulated test plug is used to provide hands-free testing of circuits. It is connected to the tester and then inserted into the center of the terminal block, which is equipped with a test socket.

Assembly Group
Marker - TIM
Catalog No. TIM00

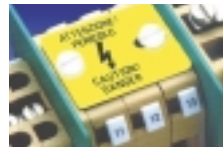

The group marker is used to identify terminal block assemblies in a cabinet. The marker snaps onto various terminal blocks and end clamps.

- O** Test Plug Socket - PSD
The test plug socket is installed in the center section of the terminal block. It then accepts the appropriate size test plug to provide a means of testing the circuit.

- U** Warning Plate - U
The warning plate comes in a bright yellow color and is printed with the international symbol for caution or danger providing a visual means of identifying high voltage circuits.

- V** Marking System - CNU
The terminal block marking system will provide fast and easy identification of circuit wiring. Several varieties are available to suit your particular application. Markers can be provided pre-marked, blank and custom printed to specific requirements.

- W** Numbering Strip - SNZ
The numbering strip is a convenient and economical method of rapidly labeling consecutive terminal blocks of the same size. The strip is available in 10 markers, either pre-numbered, blank or custom printed.

ASI can provide a completed terminal block assembly with all of the above mentioned accessories already in place; further simplifying the installation and use of our terminal blocks. Other accessories not shown above can be obtained by consulting the factory.
